Caniggia Thompson

Software Engineer

A frontend engineer with a year of experience where I specialize in TypeScript and React. I am passionate about building and improving software applications and enjoy collaborating with cross-functional teams to develop features that provide an exceptional user experience. With a tenacious nature, I approach problems head-on, always searching for the most efficient solutions. Throughout my career, I have gained experience using common developer tools such as GitHub, Jira, and Bitbucket, and have worked with teams of up to ten frontend and backend engineers in a Scrum Agile development environment. I am constantly learning and looking to improve my skills to better equip me for solving inevitable future problems.

Professional Experience

2022-05 – Current

Software Development Engineer
OfferUp, Remote

- Update legacy code bases to modern development standards, resulting in improved functionality
- Collaborate with project managers to select ambitious, yet realistic coding milestones for pre-release software projects
- Design, research, and implement new features, resulting in increased user engagement
